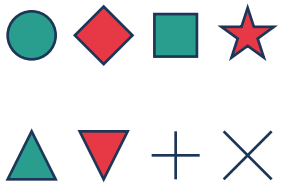
Shapes

PDFjet draws shapes as vector graphics, which stay sharp at any zoom. Each shape is a Drawable: give it a location, a size, its colors and the width of its stroke, and drawOn draws it on the page.

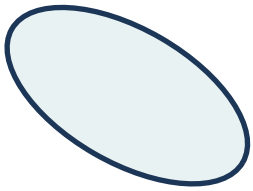
Line: solid, dashed, and dotted with round caps

Rect: filled, with a border

Rect: setCornerRadius

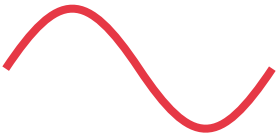


Point: the markers of charts

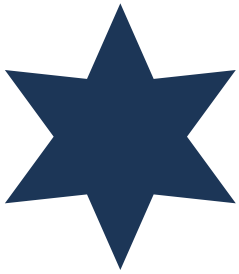


Ellipse: setRotation

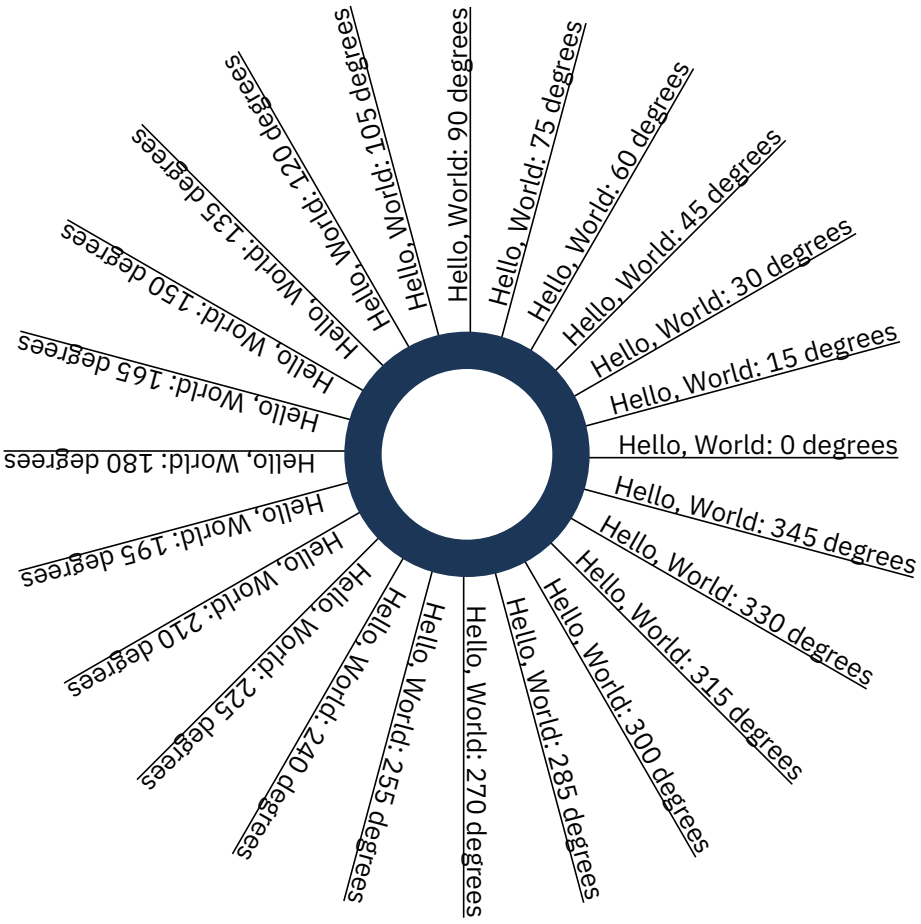
Arc: setStartAngle and setSweep



Path: Bézier curves



Path: closed and filled

Text at every angle


setTextRotation turns a TextLine about the point of its location, here every 15 degrees about the middle of the page, underlined with setUnderline.
