

Shapes

PDFjet draws shapes as vector graphics, which stay sharp at any zoom. Each shape is a Drawable: give it a location, a size, its colors and the width of its stroke, and drawOn draws it on the page.

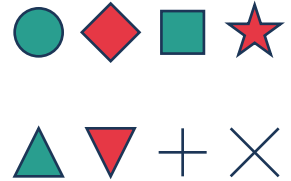

Line: solid, dashed, and dotted with round caps

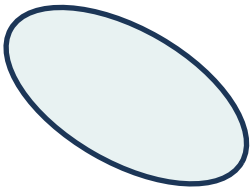

Rect: filled, with a border

Rect: setCornerRadius

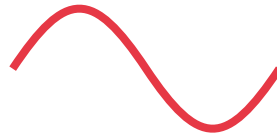

Point: the markers of charts

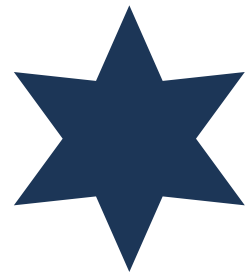

Ellipse: setRotation

Arc: setStartAngle and setSweep

Path: Bézier curves

Path: closed and filled

Text at every angle

`setTextRotation` turns a `TextLine` about the point of its location, here every 15 degrees about the middle of the page, underlined with `setUnderline`.
